

Larger Capacity Downstream Key Card Improves GlobeCaster's Graphics Capabilities

Take advantage of the increased memory and expanded power available with our 1GB DSK card.

Improve your GlobeCaster by upgrading to the latest version of graphics hardware — the 1GB DSK card. The increased memory on the card can help you make more dynamic and compelling graphics and offers many exciting features, including:

- **Larger Graphics** The new DSK Card allows users to load and play larger, more intense graphics. Create and/or import more dynamic and compelling graphics.
- **Longer Animations** Additional memory allows for much longer animated graphics. The new card will more than triple the length of animations that can be used making it easier to work with stock animation packages such as Digital Juice
- **Approximately 42 Seconds of Full Screen Video Clips** Now, GlobeCasters with a 1GB DSK Card can hold and play over 40 seconds of full screen video. A full 30-second commercial can be played using the DSK Card.
- **Add Multiple Layers** GlobeCaster 4000 is capable of having 2 independent layers of Graphics and the GC 8000 is capable of 4. This means support for more than 1 DSK effect.
- **Trade In Value** If your GlobeCaster already has additional DSK's and you wish to upgrade them to the 1 gig version contact our sales team and ask about our DSK Recycling program.

Achieve multiple layers of down stream key effects with the 1GB DSK card for GlobeCaster.
