

The Newest Control Panel for GlobeCaster Is Within Your Reach

Smaller control surface panel expands ease of use and improves system functionality

Key features of the CS-100 include:

Replica of Switcher Interface

The Panel includes all five key rows and the same number of soft keys that are present on the software interface. Around the functioning T-bar are DSK buttons, Mix, FX, Cut & Auto.

Removable Numeric Keypad

A separate numeric keypad connects via USB on the back of the CS-100, allowing maximum user flexibility. It is used to select, load and store effects, clips, framestores and other items.

A Better Fit

The CS-100, under 18" long, can fit inside a rack case and easily onto a desktop. Rounded edges and a slant from back to front provide comfort and ease of use. Mounting brackets optional.

Additional features include:

- **User Programmable Buttons** CS-100 provides buttons that can be programmed by the user
- **Standard Keyboard Compatibility** Users can incorporate a standard keyboard and mouse while using the CS-100
- **Illuminated Buttons** Each of the over 90 buttons are lit with colors that match the user interface in the Switcher Application.
- **Fade to Black** Illuminated program-out Fade to Black control.
