

Introducing a New Weapon in Your Key Effects Arsenal

Keyer FrameStore (KFS) offers increased functionality and expands your ability to create innovative key effects.

Creating chromakey effects on the Switcher Card has been the standard in GlobeCaster since its introduction more than 10 years ago. The quality of the generated effects has always been outstanding — but users were limited in the types of effects that they could create. Everything that users have known about creating effects on GlobeCaster is about to change.

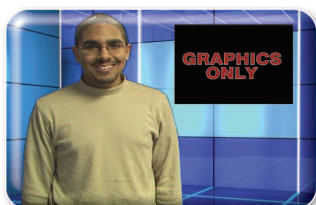

GlobalStreams is proud to introduce a new way to create key effects with our Keyer FrameStore.

Keyer FrameStore (KFS) represents a tremendous upgrade opportunity for GlobeCaster users — it offers a number of improvements, including:

- Virtual set panel with independent key settings and background stills
- Supports over-the-shoulder, picture-in-picture with live sources
- Ability to preview upcoming keyed sources
- Supports dissolves and animated wipe FX between keyed and non-keyed sources (requires 2 KFS cards if going between keyed sources)

Add 1 Keyer FrameStore Card for Increased Functionality...

Graphics over video (upper left), picture-in-picture (middle left), dissolve between keyed and non-keyed sources (bottom left) and preview keyed sources and virtual set panel directly from the Switcher interface (above).

...and Even More with Additional Cards

Double-box effects (above) and dissolves & transitions between keyed sources (above).
